

## Stenovations / DigiCAT Connection Instructions

1. Create a session in the 1CapApp dashboard and assign yourself as the writer.
2. Launch 1 Connect. If you don't have 1Connect downloaded on your captioning computer, click here and download:
  - <http://1connect.1capapp.com/1Connect.msi>
  - User and pass you enter in 1Connect **MUST** match the user and pass assigned to the 1CapApp session and the Port Number **MUST** match what is in your CAT software output in Step 4.
- 3: Start the 1CapApp session
4. Open your Cat Software and put in the following information:
  - Port: 50 (or whatever port you want. Needs to be different than Streamtext) and **MUST** match the Port you put in 1Connect in Step 2.
  - Baud Rate: 38400 (not sure this matters. It may default)
  - Check Output to TCP/IP
  - 6969 (the 4 is what Port the captioner who did the screen shot was using in her CAT software)

Check: LED Caption Vision and ASCII Line Breaks

5: Successful connection! You should see your text streaming in the 1CapApp Dashboard.

If you are not sure how to view yourself sending text to the view page, Read Document "Connecting and writing to a 1CapApp Session."
