

Stream Live Video with Closed Captioning to YouTube, Facebook & Many Other Destinations!

Use 1CapApp and Videolinq to add closed captioning to live streams.

How to Add Captions to Live Streams?

With **1CapApp** and the **Videolinq** Platform, adding closed captioning to live streams is a simple 5-step process:

1. Open a **Videolinq.com** account and login to the media dashboard. Create a Channel, Destinations, and a video Source. Find under the channel preview player the closed captioning credentials. Copy the stream key and password. See tutorial video: <https://videolinq.com/video-tutorials>.
2. Open an **1CapApp.com** account. Under "My Company" find the Videolinq box and enter the "password" in the form of "aaaaaaa@bbbbbbb:cccccc" (see image 1 below). Next, go back to the home page and click on the "Quickstart" icon. Drop down the "Videolinq" option and type in the channel "stream key" in a form of "dddddd:bbbbbbb" (see image 2 below).
3. Start the video source. Confirm you see video in the **Videolinq** preview player.
4. Send captions data to the **1CapApp** service. Confirm you see closed captioning in the **Videolinq** preview player. Click "Go Live" and enable all the destinations of the channel.
5. Video with closed captioning will display on supported platforms and services. Viewers will be able to enable/disable closed captioning on their player.

IMPORTANT: Not all social media platforms & streaming video service providers support closed captioning.

CLOSED CAPTIONING FOR LIVE STREAMING

Step 1: Update “*My Company*” Videolinq box with the “password” information taken from the Videolinq Channel Closed Captioning tab.

The screenshot shows a configuration panel titled "Videolinq". It contains two fields: "Server" with a dropdown menu currently set to "Videolinq", and "Credentials" with a text input field containing a series of dots, indicating a password.

Image 1: 1CapApp “My Company” section.

Step 2: QuickStart “*Export Platform – Videolinq*”. Type here the Videolinq channel stream key.

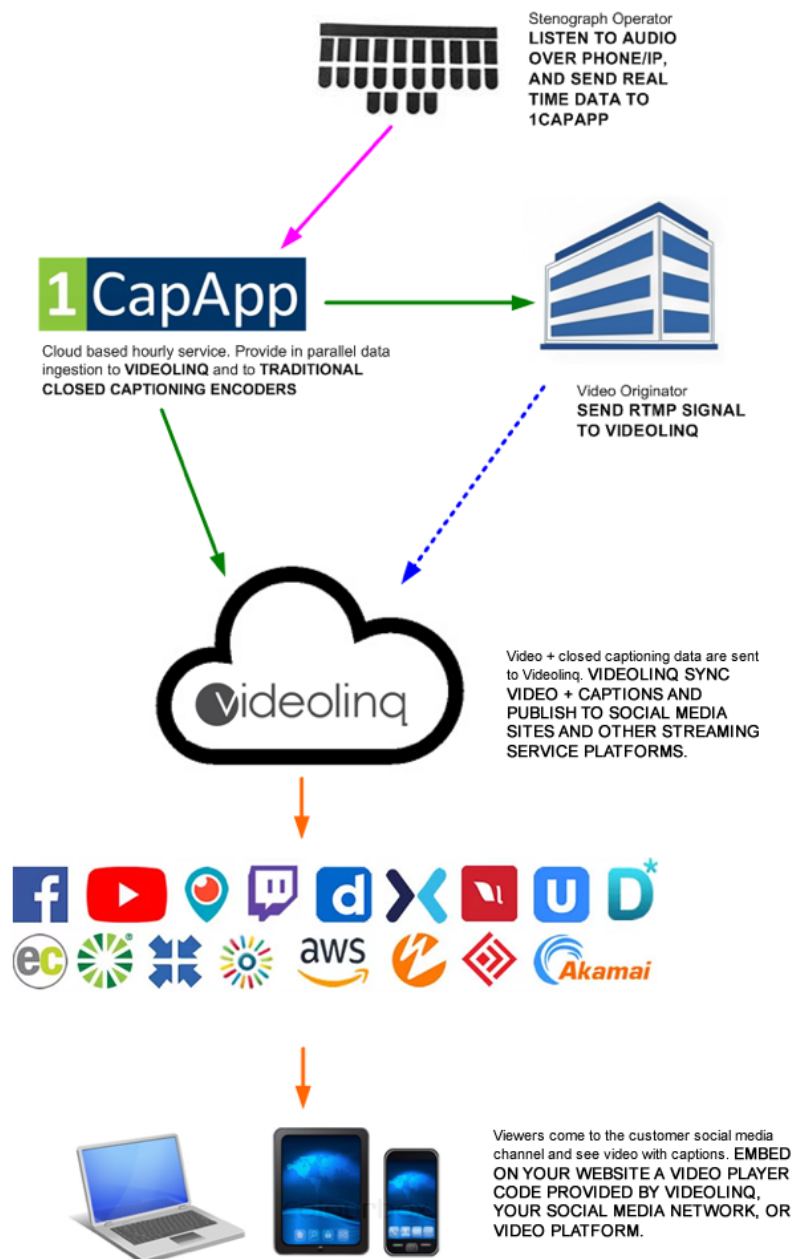

The screenshot shows a "QuickStart session" configuration panel. It includes an "Export Platform" dropdown set to "Videolinq" and a "Videolinq Stream Job" text input field containing the stream key "ddddd:bbbbbbb". Below these are three checkboxes: "Chat", "Notes", and "Copy", all of which are currently unchecked. At the bottom of the panel is a prominent green "Start" button.
